

UV BENCH

BY SALTO EFSSEN 

UV box for surface disinfection of objects

UV BENCH is designed for disinfection of products with corners and cracks where cleaning and dispensing can be difficult such as toys, soccer balls, tennis balls, tools, laptops, tablets, phones etc.

Within 10-20 seconds, a 99% disinfection of most common bacteria and virus can be achieved on the outer surfaces. It is a smart and effective way to disinfect toys in kindergartens and schools where children can be involved in the process while watching the process through the window.

A unique combination of reflective materials, elevated bottom and correctly placed UV sources enables fast and 360 degrees virus deactivation on items like laptops, toys, balls, sport equipment etc. Various standard, but also customized inserts are available on request, to accommodate multiple items like audio guides, church books, tablets, walkie talkies etc.

Easily reduces the spread of viruses and bacteria

- ✓ Quick and effective result.
- ✓ Increases the quality of cleaning.
- ✓ Reduced bioburden - reduces the spread of viruses and bacteria.
- ✓ Ready to use right away - no preheating time.
- ✓ No alcohol or gel is required for cleaning.
- ✓ Less harm to toys and tools than physical cleaning.
- ✓ Good for activating and teaching kids about disinfection technologies.

UV BENCH is a trifunctional furniture designed by renowned Danish architect Kasper Salto. The style and simplicity enables multilocation. UV BENCH is a long-lasting, useful and decorative piece of furniture.

Areas for disinfection

Offices, shop and public areas

- Electronics and tools
- Library books
- Glasses and jewelry
- Church books and walkie talkies
- Audio guides and headsets

Schools and daycare

- Toys
- Playgrounds
- Arts and crafts
- Tablets

Fitness centers, gyms and sport clubs

- Sport and training tools
- Soccer balls
- Rackets

UV BENCH is now available in four versions: Oak, Charcoal, Smokey Blue and Ash Grey. It also comes in a basic version called BASIC specifically for kindergartens and institutions as it has an extra lock for the lid.

SAFETY!

Inside UV BENCH is a powerful UV lamp system which enables fast process time to disinfect. UV BENCH can be used for irradiation on all surfaces of different materials – but must never be used to irradiate skin, humans, animals, or other organic matters.

Safety precautions when using: Key for activation, push button with timer and redundant door switch system for extra safety.

Specifications

- 230 VAC
- Power consumption 300W
- Bulb lifetime 8.000 hours
- Sensor for safety - turns off automatically when opened
- Height: 48,5 cm, Width: 47 cm, Depth: 105 cm, Weight: 42 kg.

EFSEN UV & EB TECHNOLOGY has been designing high-end UV-systems with safety in focus since 1986.
